- **Features:**
- **Energy-Storing Design:** The carbon fibre running blade is engineered to store mechanical energy during the stance phase and release it during push-off, effectively mimicking the spring action of a natural foot.
- **High-Performance Material:** Made of lightweight, high-strength carbon fibre, the blade offers exceptional durability, flexibility, and energy return while minimizing weight.
- **Shock Absorption and Energy Dissipation:** The curved structure absorbs impact forces and efficiently dissipates energy, reducing strain on the residual limb and improving comfort.
- **Optimized for Symmetry and Efficiency:** The design promotes near-symmetric step lengths and efficient gait dynamics across various speeds, enabling smoother transitions from walking to sprinting.
